Projecting a waypoint

GARMIN GPSMAP76

1

Before starting, select a reference waypoint to project from. Either use [FIND] to use an existing waypoint or [MARK] to use your current position.

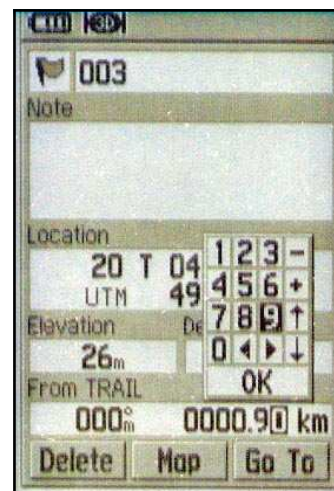

Once selected, press [MENU], highlight "Project Waypoint" and press [ENTR].

A new waypoint page is opened to store the projected waypoint.

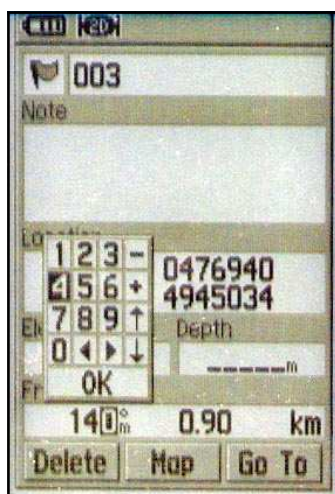

2

Highlight the "km" field at the bottom right and press [ENTR]. Use the on-screen mini key-pad to enter the distance from the reference waypoint. When done, highlight "OK" on the mini keypad and press [ENTR].

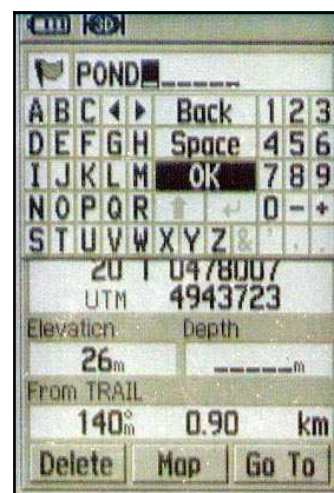

3

Highlight the degrees magnetic field at the bottom left and press [ENTR]. Use the on-screen mini key-pad to enter the bearing in degrees magnetic from the reference waypoint. When done, highlight "OK" on the mini keypad and press [ENTR].

Give the projected waypoint a name. Highlight the name field at the top of the screen and press [ENTR]. Use the on-screen mini key-pad to enter the name. When done, highlight "OK" on the mini keypad and press [ENTR]. At this point, the projected waypoint is saved and is ready to use.

4

Optional: If you used [MARK] to create your reference waypoint in step #1, you might want to save it. If this is the case, press [QUIT] to return to the reference waypoint's page. Highlight "OK" and press [ENTR]. This will save the reference waypoint.
